Section 3: Executive Threat Matrix

Grid mapping critical vulnerabilities to business risk and operational exposure vectors

Wiretap Eavesdropping & Retrospective Decryption Sev: HIGH Likelihood: Low Adversaries recording encrypted transit can retrospectively decipher all historic corporate traffic if private keys or static PSK credentials are leaked or subpoenaed. ACTIVE GAP Credential Cracking & Identity Impersonation Sev: MEDIUM Likelihood: Moderate Symmetric shared keys lack individual attribution and are vulnerable to dictionary attacks, insider theft, and rogue gateway impersonation. OBSERVED
Traffic Shape Fingerprinting & Reconnaissance Sev: MEDIUM Likelihood: High Passive eavesdroppers observing packet length clustering and inter-arrival timing can accurately infer inner application types, operational cadences, and high-value data transfers. OBSERVED Protocol Downgrade & Replay Injection Sev: LOW Likelihood: Low Sequence number validation prevents packet duplication and unauthorized state re-injection. Evaluated tunnel shows 100% strictly monotonic sequence progression. PROTECTED
