Section 3: Executive Threat Matrix

Grid mapping critical vulnerabilities to business risk and exposure vectors

Wiretap Eavesdropping & Retrospective Decryption

Sev: HIGH Low

Adversaries recording encrypted transit can retrospectively decipher all historic corporate traffic if private keys or static PSK credentials are leaked or subpoenaed.

ACTIVE GAP

Credential Cracking & Identity Impersonation

Sev: MEDIUM Moderate

Symmetric shared keys lack individual attribution and are vulnerable to dictionary attacks, insider theft, and rogue gateway impersonation.

OBSERVED

Traffic Shape Fingerprinting & Reconnaissance

Sev: MEDIUM High

Passive eavesdroppers observing packet length clustering and inter-arrival timing can accurately infer inner application types, operational cadences, and high-value data transfers.

OBSERVED

Protocol Downgrade & Replay Injection

Sev: LOW Low

Sequence number validation prevents packet duplication and unauthorized state re-injection. Evaluated tunnel shows 100% monotonic sequence progression.
