THREAT EXPOSURE & BUSINESS IMPACT EVALUATION

# Executive Threat Matrix

Comprehensive register mapping discovered cryptographic and protocol vulnerabilities to direct business risk

Section 3: Executive Threat Matrix

Grid mapping critical vulnerabilities to business risk and operational exposure vectors

### Wiretap Eavesdropping & Retrospective Decryption

Sev: HIGHLikelihood: Low

Adversaries recording encrypted transit can retrospectively decipher all historic corporate traffic if private keys or static PSK credentials are leaked or subpoenaed.

ACTIVE GAP

### Credential Cracking & Identity Impersonation

Sev: MEDIUMLikelihood: Moderate

Symmetric shared keys lack individual attribution and are vulnerable to dictionary attacks, insider theft, and rogue gateway impersonation.

OBSERVED

### Traffic Shape Fingerprinting & Reconnaissance

Sev: MEDIUMLikelihood: High

Passive eavesdroppers observing packet length clustering and inter-arrival timing can accurately infer inner application types, operational cadences, and high-value data transfers.

OBSERVED

### Protocol Downgrade & Replay Injection

Sev: LOWLikelihood: Low

Sequence number validation prevents packet duplication and unauthorized state re-injection. Evaluated tunnel shows 100% strictly monotonic sequence progression.
